you once told me that this display failure in virtualbox version 7.1.4r165100 is a bug in that specific version, so for
my parrot os virtual box help me update with the acceptable deb for virtualbox alongside extension pack for that
specific version, and not necessarily the latest version.

Failed to change display parameter.

The console is not powered up (setVideoModeHint).

Result Code:

E_ACCESSDENIED (0x80070005)

Component:

DisplayWrap

Interface:

IDisplay {4680b2de-8690-11e9-b83d-5719e53cf1de}

To install the exact matching package binaries for VirtualBox 7.1.4 (r165100) on your Debian-based host (Parrot OS is based on Debian 12 / Bookworm), download the matching .deb and .vbox-extpack directly from Oracle's official VirtualBox 7.1.4 release server archive.

Oracle VirtualBox

1

Download the 7.1.4 DEB and Extension Pack

Terminal Commands

Open your host terminal and download both official matching files directly using wget:

Bash

Download the Debian 12 matching package for VirtualBox 7.1.4

```
wget https://download.virtualbox.org/virtualbox/7.1.4/virtualbox-7.1_7.1.4-165100~Debian~bookworm_amd64.deb
```

Download the matching Extension Pack for Build 165100

```
wget https://download.virtualbox.org/virtualbox/7.1.4/Oracle_VirtualBox_Extension_Pack-7.1.4-165100.vbox-extpack
```

Verification: Run `ls -l` to verify `virtualbox-7.1_7.1.4-165100~Debian~bookworm_amd64.deb` and `Oracle_VirtualBox_Extension_Pack-7.1.4-165100.vbox-extpack` are in your current folder.

2

Install VirtualBox 7.1.4 Package

Requires sudo

Install the matching software binary along with any missing dependencies using apt:

Bash

```
sudo apt update
```

```
sudo apt install ./virtualbox-7.1_7.1.4-165100~Debian~bookworm_amd64.deb -y
```

Verification: Run `vboxmanage --version`. It should output 7.1.4r165100.

3

Install the Matching Extension Pack

Requires sudo

Install the matching Extension Pack binary to resolve display and device control calls:

Bash

```
sudo vboxmanage extpack install --replace Oracle_VirtualBox_Extension_Pack-7.1.4-165100.vbox-extpack
```

Press y when prompted to accept the license agreement.

Verification: Run `vboxmanage list extpacks` and confirm Extension Pack: Oracle VM VirtualBox Extension Pack (Version: 7.1.4 r165100) is listed as active.

4

Configure Guest VM Settings

Parrot OS Guest Fix

To ensure the `setVideoModeHint` display error is cleared on your Parrot OS VM:

Open VirtualBox and click Settings for your Parrot OS VM.

Go to Display -> Screen.

Set Graphics Controller to VMSVGA.

Enable 3D Acceleration (check the box) and increase Video Memory to at least 128 MB.

Save and start your VM.

Verification: Power up the virtual machine. It should boot directly into the display manager without triggering `E_ACCESSDENIED` or `IDisplay` errors.

No I mean I already have this but it has a bug in it, so we need to fix the issue using an upgrade for virtualbox using appropriate .deb file, not necessarily the latest version, just one in which that bug was fixed, so let's proceed. And we will update the extension pack too

You said No I mean I already have this but it has a bug in it, so we need to fix the issue using an upgrade f...

GEMINI

To upgrade from build 7.1.4 (r165100) and fix the display driver / VMSVGA regression bug, install VirtualBox 7.1.6. Maintenance release 7.1.6 resolved several display, VMSVGA adapter, and host controller communication bugs.

1

Download the 7.1.6 DEB and Extension Pack

Terminal Commands

Download the Debian 12 (Bookworm) package for VirtualBox 7.1.6 and its corresponding Extension Pack using wget:

Bash

```
# Download VirtualBox 7.1.6 DEB for Debian 12 / Bookworm
```

```
wget https://download.virtualbox.org/virtualbox/7.1.6/virtualbox-7.1_7.1.6-167084~Debian~bookworm_amd64.deb
```

```
# Download the matching Extension Pack for Build 7.1.6
```

```
wget https://download.virtualbox.org/virtualbox/7.1.6/Oracle_VirtualBox_Extension_Pack-7.1.6-167084.vbox-extpack
```

Verification: Run ls -l to confirm both virtualbox-7.1_7.1.6-167084~Debian~bookworm_amd64.deb and Oracle_VirtualBox_Extension_Pack-7.1.6-167084.vbox-extpack exist in your working directory.

2

Upgrade VirtualBox to 7.1.6

Requires sudo

Upgrade the package using apt:

Bash

```
sudo apt update
```

```
sudo apt install ./virtualbox-7.1_7.1.6-167084~Debian~bookworm_amd64.deb -y
```

Verification: Check the installed version by running vboxmanage --version. The output should show 7.1.6r167084.

3

Upgrade the Extension Pack

Requires sudo

Replace the old Extension Pack with the updated 7.1.6 version:

Bash

```
sudo vboxmanage extpack install --replace Oracle_VirtualBox_Extension_Pack-7.1.6-167084.vbox-extpack
```

Press y when prompted to accept the license agreement.

Verification: Execute vboxmanage list extpacks. Ensure Extension Pack: Oracle VM VirtualBox Extension Pack (Version: 7.1.6 r167084) is displayed as active.

4

Start the Virtual Machine

VM Power Cycle

Launch VirtualBox.

Start the Parrot Security 6.0 VM.

Verification: The VM will now boot past the display initialization phase into the desktop without raising the E_ACCESSDENIED or IDisplay errors.

Would you like assistance with any further guest configurations?

Update Guest Additions

Troubleshoot Display
