How do I fix my mums phone that is currently affected by ads.Thye show up from everywhere and we can't tell from which app they are from.A reboot does not fix.I am remotely on scrcpy so lets fix it using commands

YOU

You said How do I fix my mums phone that is currently affected by ads.Thye show up from everywhere and we can...

GEMINI

To identify and remove the rogue app serving ad overlays using ADB, follow these steps while keeping the ad currently visible on the phone screen:

JPG

1. Identify the Culprit App Package

Run one of the following commands in your terminal while the ad is actively displayed on the phone screen:

For Android 10+:

Bash

adb shell dumpsys activity top | grep -E "ACTIVITY"

or

Bash

adb shell dumpsys window | grep -E "mCurrentFocus|topResumedActivity"

Find Overlay/System Alert Windows (if the ad is drawn over other apps):

Bash

adb shell dumpsys window windows | grep -i "package"

Look at the package name in the output (e.g., com.cleaner.fast.app, com.utility.flashlight, or a generic/hidden name).

2. Force Stop and Uninstall the App

Once you have identified the suspicious package name (<package_name>):

Force stop the ad immediately:

Bash

adb shell am force-stop <package_name>

Uninstall the app directly via ADB:

Bash

adb uninstall <package_name>

3. Check for Recently Installed/Updated Apps

If the overlay commands don't directly reveal the app, list the most recently installed apps to locate deceptive applications (e.g., utility apps, cleaners, PDF converters, or torch/flashlight apps):

Bash

adb shell pm list packages -3 -u

(Note: To see install dates, run adb shell dumpsys package <package_name> | grep "firstInstallTime")

To uninstall any suspicious application:

Bash

adb shell pm uninstall -k --user 0 <package_name>

GEMINI

Since you are in Windows Command Prompt (cmd.exe), standard Linux utilities like grep are not available by default. You can use Windows' equivalent findstr instead.

While the ad is currently open on screen, run one of these Windows-compatible commands:

JPG

1. Identify the Ad App Package

Run this command in your Command Prompt:

DOS

```
adb shell dumpsys activity top | findstr "ACTIVITY"
```

If that returns multiple lines or doesn't pinpoint it, try checking the current focused window:

DOS

```
adb shell dumpsys window | findstr /I "mCurrentFocus topResumedActivity"
```

Look for the package name in the output (it usually looks like com.developer.appname).

2. Close and Uninstall the App

Once you identify the package name (e.g., com.example.badapp):

Force stop the ad app:

DOS

```
adb shell am force-stop <package_name>
```

Uninstall it from the device:

DOS

```
adb uninstall <package_name>
```

YOU

You said I saw all these C:\Users\Mum\Downloads\scrcpy-win64-v3.3.3 (1)\scrcpy-win64-v3.3.3>adb shell
dumpsy...

GEMINI

We found it! Look at that third line under mCurrentFocus:
com.document.readerx.viewer/com.bytedance.sdk.openadsdk.activity.single.TTFullScreenExpressVideoActivity
The app causing the pop-up ads is com.document.readerx.viewer (likely named something like "Document Reader"
or "PDF Viewer" on her phone). It is currently running a ByteDance ad SDK full-screen activity.
Run these two commands in your Command Prompt to close it and remove it completely:

1. Stop the ad instantly
DOS
adb shell am force-stop com.document.readerx.viewer
2. Uninstall the rogue app
DOS
adb uninstall com.document.readerx.viewer

Once that command says Success, the ad pop-ups from this app will stop immediately!

You said Now a cool powerfull command to erase caches and then we reboot the device
Now a cool powerfull command to erase caches and then we reboot the device

YOU

You said Now a cool powerfull command to erase caches and then we reboot the device

GEMINI

Here are the commands to clear system/app caches and reboot her device right from your command prompt:

1. Clear Application Caches

To trim caches across all installed apps:

DOS

```
adb shell pm trim-caches 999G
```

2. Reboot the Device

DOS

```
adb reboot
```

Once the phone boots back up, scrcpy will disconnect, and her phone should be completely free of those ad overlays!
