We have these 3 photos for domain and hosting now, lets add my service labour and give me the total amount i should charge the client according to this
[17/08, 4:43 pm] Nyumbacomfort Mr Gatu: Do you know how to search whether the website www.nyumbacomfort.co.ke is still available? We used it up to 2022 but didn't renew it.
[17/08, 5:48 pm] Nyumbacomfort Mr Gatu: Say maximum 4 pages. Website design including hosting is how much?

You said We have these 3 photos for domain and hosting now, lets add my service labour and give me the total ...

GEMINI

To quote your client accurately for a 4-page website, here is a clear price breakdown incorporating the domain, hosting, tax, and standard Kenyan market rates for design labor.

Item	Details	Cost (KES)
Domain & Hosting	Starter Hosting + Domain (nyumbacomfort.co.ke)	2,639.99
Tax	Kenyan VAT (16%)	422.40
Direct Hosting	Subtotal Actual Hosting/Domain Expense	3,062.40
Service & Design Labor	Design & development for up to 4 pages (Standard: KES 15,000 – 25,000)	20,000.00
Total Quote to Client	Full Package Price	KES 23,062.40

Suggested Client Quote Message

Website Design & Hosting Quote

Domain & Hosting (1 Year): KES 3,062.40 (Includes .co.ke domain registration, web hosting, and 16% VAT)

Website Design & Setup (Up to 4 Pages): KES 20,000.00 (Includes mobile-responsive design, basic SEO setup, content integration, and contact form)

Total Amount: KES 23,062.40 (or round to KES 23,000 / KES 25,000 depending on your preferred pricing structure)

Since you already have my above breakdown, and I have an amazin ec2 instance running and I do my things manually, i.e nginx ssl databases, wordpress installations and everything else all by myself, help me know what kind of technology we should use for this site and provide direct links to github projects that we could implement and get working as per client specifications,so I will just have to edit about, contact, location homepage, gallery sections, because this is not an ecommerce site and client just wanted it simple, so ofcourse wordpress would be an overkill.and maybe we dont even need db, but lets get the ball rolling

Technology Stack Recommendation

For a lightweight, fast 4-page site with static sections (Home, About, Services, Gallery, Contact) and no dynamic user data, standard static tools are optimal. Avoid dynamic CMS overhead like WordPress or heavy database configurations:

Core Engine: Plain HTML5 / CSS3 (Tailwind CSS or Bootstrap 5) / Vanilla JS or a Static Site Generator (Hugo or Astro).

Web Server: Nginx (Serving static assets directly from `/var/www/nyumbacomfort/html`).

SSL/TLS: Let's Encrypt via Certbot (`certbot --nginx -d nyumbacomfort.co.ke -d www.nyumbacomfort.co.ke`).

Form Processing (Contact Page): Static HTML forms can route via free serverless API endpoints like Formspree or Web3Forms directly to the client's email, avoiding local PHP mail setup.

Open-Source GitHub Repositories & Templates

1. Modern Bootstrap 5 Business & Agency Templates

Clean multi-page structures with pre-built hero headers, service grids, responsive image galleries, and contact layouts:

Codeo Free Agency Website Template — Lightweight HTML5/Bootstrap 5 template for business and company profiles.

Lucas Creative Portfolio & Business Template — Clean responsive layout featuring sections for services, showcase gallery, about, and contact.

2. Clean HTML5 / Tailwind Static Collections

Minimalist code bases without unnecessary JS dependencies:

Loopple HTML / Tailwind Landings & Templates — Pre-configured responsive HTML/CSS layouts ideal for simple corporate sites.

Learning Zone 150+ Free HTML5 Templates — Open repository containing raw HTML5/CSS3 site templates categorized by business type.

Implementation Workflow on EC2

Bash

1. Clone selected static template to web root

```
sudo git clone <REPOSITORY_URL> /var/www/nyumbacomfort/html
```

2. Configure Nginx Server Block (`/etc/nginx/sites-available/nyumbacomfort`)

```
server {
    listen 80;
    server_name nyumbacomfort.co.ke www.nyumbacomfort.co.ke;
    root /var/www/nyumbacomfort/html;
    index index.html;
    location / {
        try_files $uri $uri/ =404;
    }
}
```

3. Enable site and activate SSL

```
sudo ln -s /etc/nginx/sites-available/nyumbacomfort /etc/nginx/sites-enabled/
```

```
sudo nginx -t && sudo systemctl reload nginx
```

```
sudo certbot --nginx -d nyumbacomfort.co.ke -d www.nyumbacomfort.co.ke
```

I want to be right about what I am looking for, is it about interior design, if the main thing nyumbacomfort.co.ke deals in are mosquito nets, curtains, curtain rods, blinds, at times, so they make from materials, then go to client site, i.e client house and do their installation then get paid. They also have a facebook page where they keep their content to enhance their visibility. So what template should I be looking for

YOU

GEMINI

Yes, you are spot on. While "Interior Design" is the overarching umbrella, the specific niche you are looking for is Home Furnishings & Window Treatments / Interior Décor & Installation.

Because they measure, custom-make materials, and install on-site (curtains, blinds, rods, net installations), the site needs to function as a Local Service & Installation Portfolio rather than an e-commerce shop.

Key Template Characteristics to Look For

Before/After & Project Gallery: A dedicated portfolio grid where you can upload photos of real houses they've worked on (directly embedding or linking content from their Facebook page).

"Request a Free Quote / Measurement" Call-to-Action: Highlighting a site visit option (e.g., "Book an On-Site Measurement").

Service Breakdown Section: Cards clearly detailing Curtains & Drapes, Blinds (Vertical/Roller), Curtain Rods & Accessories, and Mosquito Nets.

Social Proof & Facebook Integration: Links or embeds pulling from their Facebook page to show customer feedback and ongoing work.

Top Free GitHub Templates & Starter Repositories

1. Interior & Furnishing HTML5 Templates

Codeo Free Agency & Services Template — Clean Bootstrap 5 multi-page layout. Perfect for splitting into Home, Services (Furnishings/Blinds), Gallery, and Contact.

Lucas Creative Portfolio HTML/CSS — Tailored for visual work and installation showreels with large hero images and grid galleries.

2. General Service & Tradesmen HTML Starter

Free Static HTML Website Templates Collection — Contains lightweight home service and decor static layouts with pre-built contact forms and gallery grids.

Structure for nyumbacomfort.co.ke

Homepage (index.html): Hero section featuring high-res window blind/curtain installs, core services summary, client testimonial snippets, and a "Book On-Site Visit" CTA button.

Services (services.html): Itemized list covering Mosquito Nets, Curtains, Blinds, and Rods, explaining the custom design-to-installation process.

Gallery (gallery.html): Simple lightbox image grid displaying real completed projects (cross-posted from Facebook).

Contact & Location (contact.html): Click-to-call phone buttons, WhatsApp direct chat link, physical location, and embedded Formsprees/Web3Forms inquiry form.
